

The Tutorial Triage Protocol

By **StackMark** — For designers who save tutorials they never watch.

You are reading this because your bookmarks are a graveyard. You probably have hundreds of UI/UX tutorials, Figma tricks, and framer masterclasses saved. You've convinced yourself that simply clicking "Save" is the same thing as learning. It isn't.

I built **StackMark** because I audited my own folders:
I had saved 247 design tutorials. I had watched exactly 8.

Before **StackMark** launches to fix this permanently, you need to stop the bleeding today.

Execute these three steps immediately. Do not think. Just click.

STEP 1: The 6-Month Purge

Open your YouTube "Watch Later" playlist, your Notion board, or your Chrome bookmarks. Action: Delete every single tutorial saved more than 6 months ago. Why: Technology moves too fast. That Figma auto-layout tutorial from 2024 is already outdated. If you haven't watched it in 6 months, you are never going to watch it. Let it go. You will instantly feel 50 pounds lighter.

STEP 2: The "Rule of One"

Look at the tutorials you have left. Action: Pick exactly ONE tutorial. Leave it open in a new tab. Why: Hoarding happens because of choice paralysis. When you have 50 options, you choose zero. Pick one.

STEP 3: The Graveyard Shift

Action: Take all the remaining tutorials and dump them into a single folder called "The Graveyard." Why: Get them out of your daily sightline. They are mental clutter. If you truly need to learn how to do advanced prototyping next month, you will just search for a new tutorial anyway.

Your Next Move: Watch that ONE tutorial you left open. Stop stacking. Start finishing.
